

INGRES AI - Chat Transcript

You:

Tell me about the groundwater status and AEGR for Hyderabad.

INGRES AI:

The groundwater status for Hyderabad district has shown fluctuations over the years, ranging from Critical to Over-Exploited. The Annual Extractable Ground Water Resource (AEGR) has also varied.

Here's a summary of the groundwater status and AEGR for Hyderabad district:

* **Year 2024:** The Stage of Extraction was **98.3%**, categorizing it as **Critical**. The AEGR was **6165.55 Ham**, and the Total Extraction was 6061.83 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2024].

* **Year 2023:** The Stage of Extraction was **102.8%**, categorizing it as **Over-Exploited**. The AEGR was **5804.94 Ham**, and the Total Extraction was 5966.86 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2023].

* **Year 2022:** The Stage of Extraction was **93.6%**, categorizing it as **Critical**. The AEGR was **5808.35 Ham**, and the Total Extraction was 5437.69 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2022].

* **Year 2021:** The Stage of Extraction was **96.0%**, categorizing it as **Critical**. The AEGR was **6647.43 Ham**, and the Total Extraction was 6380.81 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2021].

* **Year 2019:** The Stage of Extraction was **112.3%**, categorizing it as **Over-Exploited**. The AEGR was **1559.17 Ham**, and the Total Extraction was 1750.55 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2019].

The trend for Hyderabad district (JEPA) has consistently been improving at -3.5%/year across these years [SOURCE: INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2019; INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2021; INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2022; INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2023; INGRES Assessment Data, TELANGANA — Hyderabad District, Year 2024].

District, Year 2020

You:

Which districts in Rajasthan are worsening and trending toward Over-Exploited?

INGRES AI:

Based on the provided trend analysis, the following districts in Rajasthan are showing a worsening trend:

* **Jodhpur Urban (Jodhpur district)**: This district is already **Over-Exploited** with a Stage of Extraction ranging from **82.3% (Semi-Critical)** to **120.7% (Over-Exploited)** across different assessment units. It shows a "worsening_safe" trend with a velocity of **+12.8%/year** [SOURCE: JEPA Trajectory Search, Jodhpur Urban / Jodhpur, Rajasthan].

* **Baran district**: This district is consistently **Over-Exploited** with a Stage of Extraction ranging from **114.5%** to **134.9%**. It shows a "worsening_critical" trend with a velocity of **+3.2%/year** [SOURCE: JEPA Trajectory Search, Baran, Rajasthan].

You:

How is AEGR calculated according to the GEC manual?

INGRES AI:

AEGR, or Annual Extractable Ground Water Resources, is calculated by subtracting Natural Discharges (ND) from the Total Annual Ground Water Recharge (TGWR) [SOURCE: GEC User Manual, Section 2.3, Page 25].

The formula is:

****AEGR = TGWR - ND**** [SOURCE: GEC User Manual, Section 2.3, Page 25]

* ****TGWR**** represents the Total Ground Water Recharge [SOURCE: GEC User Manual, Section 2.3, Page 25].

* ****ND**** represents Natural Discharges, which are ecological commitments that need to be fulfilled before the extractable resources are defined [SOURCE: GEC User Manual, Section 2.3, Page 25].

■ Sources:

* GEC User Manual, Section 2.3 (Annual Extractable Ground Water Resource), Page 25

Citations: GEC User Manual, Section 2.0 (Methodology Used), Page 9, GEC User Manual, Section (), Page 1, GEC User Manual, Section 2.3 (Annual Extractable Ground Water Resource), Page 25, GEC User Manual, Section 2.5 (Stage of Ground Water Extraction (%)), Page 29, GEC User Manual, Section 12.0 (References), Page 118

You:

What is the formula for the Stage of Extraction?

INGRES AI:

The formula for the Stage of Extraction is calculated as follows:

****Stage of Extraction (%) = (GE) / (AEGR) * 100**** [SOURCE: GEC User Manual, Section 2.5 (Stage of Ground Water Extraction (%)), Page 29]

Where:

* ****GE**** = Existing Gross Ground Water Extraction from all uses [SOURCE: GEC User Manual, Section 2.5 (Stage of Ground Water Extraction (%)), Page 29]

* ****AEGR**** = Annual Extractable Ground Water Resources [SOURCE: GEC User Manual, Section 2.5 (Stage of Ground Water Extraction (%)), Page 29]

This percentage defines the amount of water extracted from the total extractable groundwater resources and is used to categorize assessment units into different groundwater development categories (Safe, Semi-Critical, Critical, Over-Exploited) [SOURCE: GEC User Manual, Section 2.5 (Stage of Ground Water Extraction (%)), Page 29].

■ Sources:

* GEC User Manual, Section 2.5 (Stage of Ground Water Extraction (%)), Page 29

You:

Plot the trend of the stage of extraction for Nalgonda over the years.

INGRES AI:

The Stage of Extraction for Nalgonda, Nalgonda District, Telangana has shown a fluctuating trend over the years, moving between Safe and Semi-Critical categories.

Here's the data:

* In ****2017****, the Stage of Extraction was ****70.6%****, categorized as ****Semi-Critical**** [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2017].

* By ****2020****, it improved to ****64.9%****, falling into the ****Safe**** category [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2020].

* However, in ****2024****, the Stage of Extraction increased significantly to ****88.8%****, returning to the ****Semi-Critical**** category [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2024].

* The trend for Nalgonda, Nalgonda District, is identified as "worsening_safe" with a velocity of +4.5%/year, indicating a general increase in the Stage of Extraction over time [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2017; INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2024; INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2020].

You:

Compare the groundwater extraction percentages across Rajasthan for 2020.

INGRES AI:

In 2020, several assessment units in Rajasthan showed significant groundwater over-extraction. Here's a comparison of some of these units:

* **LAXMANGARH, ALWAR District** recorded the highest Stage of Extraction at **273.6%**, categorizing it as **Over-Exploited**. Its AEGR was 3303.92 Ham, with a total extraction of 9040.99 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — LAXMANGARH, ALWAR District, Year 2020].

* **RANIWARA, JALOR District** also showed extreme over-extraction with a Stage of Extraction of **229.7%**, falling into the **Over-Exploited** category. The AEGR for this unit was 6315.60 Ham, and total extraction was 14507.09 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — RANIWARA, JALOR District, Year 2020].

* **JHOTWARA_RURAL, JAIPUR District** had a Stage of Extraction of **237.6%**, indicating it is **Over-Exploited**. Its AEGR was 2610.43 Ham, and total extraction was 6203.42 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — JHOTWARA_RURAL, JAIPUR District, Year 2020].

* **MANDAWAR, ALWAR District** was **Over-Exploited** with a Stage of Extraction of **186.1%**. The AEGR was 7091.52 Ham, and total extraction was 13193.87 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — MANDAWAR, ALWAR District, Year 2020].

* **RAJGARH, ALWAR District** had a Stage of Extraction of **161.1%**, also categorized as **Over-Exploited**. Its AEGR was 2208.73 Ham, and total extraction was 3557.97 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — RAJGARH, ALWAR District, Year 2020].

* **BANSUR, ALWAR District** showed a Stage of Extraction of **152.4%**, making it **Over-Exploited**. The AEGR was 7379.63 Ham, and total extraction was 11249.19 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — BANSUR, ALWAR District, Year 2020].

* **RAJSAMAND, RAJSAMAND District** was **Over-Exploited** with a Stage of Extraction of **145.7%**. Its AEGR was 1808.38 Ham, and total extraction was 2634.43 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — RAJSAMAND, RAJSAMAND District, Year 2020].

* **SARWAR, AJMER District** had a Stage of Extraction of **129.8%**, indicating it is **Over-Exploited**. The AEGR was 1997.99 Ham, and total extraction was 2594.13 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — SARWAR, AJMER District, Year 2020].

* **RATANGARH, CHURU District** was **Over-Exploited** with a Stage of Extraction of **113.7%**. Its AEGR was 2021.99 Ham, and total extraction was 2299.95 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — RATANGARH, CHURU District, Year 2020].

* **RAMSAR, BARMER District** showed a Stage of Extraction of **112.6%**, categorizing it as **Over-Exploited**. The AEGR was 638.74 Ham, and total extraction was 719.52 Ham [SOURCE: INGRES Assessment Data, RAJASTHAN — RAMSAR, BARMER District, Year 2020].

All these units in Rajasthan were classified as **Over-Exploited** in 2020, indicating that the annual groundwater extraction significantly exceeded the Annual Extractable Groundwater Resource (AEGR).

What is the extraction stage in Nalgonda?

INGRES AI:

The extraction stage in Nalgonda district has varied over the years. Here's a summary of the available data:

* ****2022:**** The Stage of Extraction for Nalgonda district was ****41.3%****, categorizing it as ****Safe**** [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda District, Year 2022].

* The Annual Extractable Ground Water Resource (AEGR) was 138890.26 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda District, Year 2022].

* Total Extraction was 57418.04 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda District, Year 2022].

* The trend indicated stability with a -0.3%/year change [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda District, Year 2022].

* ****2019:**** The Stage of Extraction for Nalgonda district was ****50.4%****, categorizing it as ****Safe**** [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda District, Year 2019].

* The AEGR was 110502.11 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda District, Year 2019].

* Total Extraction was 55683.53 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda District, Year 2019].

* The trend indicated stability with a -0.3%/year change [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda District, Year 2019].

* **2020 (Nalgonda block):** The Stage of Extraction for Nalgonda block within Nalgonda district was **64.9%**, categorizing it as **Safe** [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2020].

* The AEGR was 6213.66 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2020].

* Total Extraction was 4035.54 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2020].

* **2017 (Nalgonda block):** The Stage of Extraction for Nalgonda block within Nalgonda district was **70.6%**, categorizing it as **Semi-Critical** [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2017].

* The AEGR was 5633.90 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2017].

* Total Extraction was 3979.47 Ham [SOURCE: INGRES Assessment Data, TELANGANA — Nalgonda, Nalgonda District, Year 2017].
